Submitted (21-0CT-1999) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA on Apr 22, 2000 this sequence version replaced gi:6454033. All repeats were identified using RepeatMasker:
                                                                                                                                                      Tesfaye,S., Tirrell,A., Vassiliev,H., Vo,A., Wheeler,J., Wu,X., Wyman,D., Ye,W.J., Zlmmer,A. and Zody,M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                     Sequencing vector: M13; M77815; 100% of reads Sequencing vector: M13; M77815; 100% of reads Chemistry: Dye-terminator B1g Dye; 100% of reads Assembly program: Phrap; version 0.960731 Consensus quality: 117571 bases at least Q40 Consensus quality: 145749 bases at least Q30 Consensus quality: 160940 bases at least Q20 Insert size: 185000; agarose-fp Insert size: 171264; sum-of-contigs Quality coverage: 2.9 in Q20 bases; sum-of-contigs Quality coverage: 3.2 in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                       Contact: sequence_submissions@genome.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              * NOTE: This record contains 92 individual

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
Homo sapiens clone RP11-24J9, LOW-PASS SEQUENCE SAMPLING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Contact: sequence_submissions@genome.wi.mit.edu

                                                                                                                 The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABCl expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  53370 ttcagaagaagacaaacagtaagcttgggtttttcagcagcggggggttctctctatttt 53429
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cardiovascular disease; coronary artery disease; coronary restenosis; cerebrovascular disease; peripheral vascular disease; Alzheimer's disease; Nomann-Pick disease; Huntington's disease; X-linked adrenoleukodystrophy; cancer; gene therapy; genetic diagnosis; prophylaxis; drug screening; transgenic animal; ss.

The invention relates to the human ABC1 cholesterol transporter protein (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is a member of the ATP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transport, particularly intracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol efflux from the cell. The gene encoding ABC1 is cocated on chromosome 9q31, and mutations in this gene are associated with two genetic HDL (High density lipoprotein) deficiency (HAA). These diseases are distinguishable in that TD is an autosomal recessive disorder, while the inherited as an autosomal dominant trait. Low levels of HDL ("good cholesterol") in the blood correlate with a high risk of cardiovascular disease, coronary restencess, and peripheral vascular disease.

Conversely, a high level of HDL has protective effects against cardiovascular disease. The invention promprising human ABC1 nucleic acids, and methods of gene therapy for the treatment or prevention of cardiovascular disease compounds which mimic ABC1 activity, one or second and methods for determining whether a patient has an increased risk for cardiovascular disease compounds which mimic ABC1 activity, one compasses compounds which mimic ABC1 activity, one or second or stimulate ABC1 expression and methods of screening for such compounds with interaction or prevent cardiovascular disease, especially coronary artery disease, or prevent cardiovascular disease, especially coronary artery disease, corporascular disease, sepecially coronary artery disease, corporascular disease, sepecially soronary actenosis or peripheral vascular disease, which as alzheimer's disease, which acceptive soronary selectoris soronary actery disease, with ABC1 bloological activity, such as Alzheimer's disease, with annothing or or prevent cardiovascular disease. They may also b

are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.

```
The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polypeptide. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9422-9431. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and

The present sequence encodes a human adenosine triphosphate (ATP)
binding cassette protein (ABC) 1 polypeptide. ABC1 resides in cell
membranes and utilises ATP hydrolysis to transport a wide variety of
substrates across the plasma membrane. ABC1 is a pivotal protein in
the apolipoprotein-mediated mobilisation of intracellular cholesterol
stores. ABC1 is defective in Tangier disease, a genetic disorder
characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is
localised to chromosome 9422-9431. The ABC1 genes and proteins are
useful for developing pharmaceutical agents for the treatment of heart
clisease and other disorders associated with hypercholesterolemia and
atherosclerosis. The genes are useful for developing screening assays to
screen for compounds that regulate the expression of genes associated
with cholesterol transport. The genes and proteins are also useful for
are also useful as diagnostic indicators of cardiovascular disease and
cother disorders associated with hypercholesterolemia.

The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) i polypepitde, and is isolated from a Tangier disease patient. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal Tangier disease, a genetic disorder characterised by corromosome 9922-9931. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                        disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders
                                                                                                                  Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               216

binding cassette protein (ABC) I polypeptide, and is isolated from a Tangier disease patient. ABC1 resides in cell membranes and utilises a Tangier disease patient. ABC1 resides in cell membranes and utilises. ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier diseases, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 942-9431. The ABC1 genes and proteins are useful for developing that required is for the treatment of heart disease and other classred with hypercholesterolesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol caracterolemic as alagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and

ABCI resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangler disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome pharmaceutical agents for the treament of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with hopercholesterolemia and atherosclerosis. transport. The genes and proteins are also useful for are also useful for are also useful assays to screen disorders as diagnostic indicators of cardiovascular disease and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polynucleotides and polypeptides, useful for treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              97 cagitaatgaccagccacggggggtcctgctgtcagctctggccgctgccttccagggct 156
                                                               Nucleotide sequence of ABC1 polypeptide from Tangier disease patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps

```
binding cassette protein (ABC) I polypeptide, and is isolated from a Tangier disease patient. ABC1 resides in cell membranes and utilises argument disease patient. ABC1 resides in cell membranes and utilises plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characteristed by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 942-9431. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other consounds are useful for developing consorted with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol cangounds as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polynucleotides and polypeptides, useful for treatment of heart disease and other disorders associated with hypercholesterolemia and

transport of cholesterol. The polypeptide encoded by the ABC1 gene is useful for screening for an active ingredient for the prevention or treatment of a disease resulting from dysfunction in the reverse transport of cholesterol. The nucleic acids and polypeptides are also useful for treating and preventing cardiovascular and neurological pathologies, and other diseases e.g. Tangier disease, lecithin-cholesterol (LCAT) deficiency, malaria and diabetes.

sequences ABA08225-ABA09574 represent incleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a furthed against the polypeptides, or producing the novel polypeptides, and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides or antibodies and asample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may of the polypeptides of the invention activities; is tem cell proliferation or cell have activities; reachior activity; issue growth activity; haematopolesis regulatory activity; tissue growth activity; haematopolesis regulatory activities; haemostatic, thrombotic or fundunomdulatory activity; activities; haemostatic, thrombotic or thrombolytic activities; receptor or ligand activities; or may be invention are useful for preventing, treating or ameliotating medical conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions and unceres, namentopoletic disorders (e.g., myeloid or lymphoid cell conditions, e.g., by protein or gene therapy. Such conditions and unceres, namentopoletic disorders (e.g., myeloid or lymphoid cell conditions, e.g., by protein or gene therapy. Such conditions and conditions are useful prowth, polypeptides involved with tissue regeneration and repair growth, polypeptides involved with tissue regeneration and repair growth. Polypeptides involved with tissue regeneration and repair growth. Polypeptides involved with tissue regeneration and tental growth. Polypeptides involved with tissue tradement of viral, bacterial and fungal infections in addition to immune disease or accidental d

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, inkubin activity and acti

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to four common polymorphisms in the gene encoding ATP-binding cassette transporter-1 (ABC1). ABC1 is associated with decreased ApoA-1 mediated efflux of cholesterol. The polymorphisms in ABC1 directly affects cellular lipid homeostasis, which is a key factor in the atherogenetic processes. The ABC1 polymorphisms are useful for diagnosing and treating lipid disorders, cardiovascular diseases (coronary heart disease, atherosclerosis) and inflammatory diseases (psoriasis, lupus erythematosus). The identification of ABC1 as a transporter for interleukin-lobeta (IL-lobeta) identifies this gene as a candidate for treatment of inflammatory diseases including rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       97 cagttaatgaccagccacgggcgtccctgctgtcagctctggccgctgccttccagggct 156

```
The present sequence is that of cDNA encoding the human adenosine triphosphate (ATP) binding cassette transporter 1 (ABC1) protein (see AAM50227). The sequence includes an extended open reading frame (ORF) to that provided by the sequence in AAI70314, using an alternative ATG codon as initiation codon and thereby adding an
                                                                                                                                                                                                                                                                                                                                                                                                                           /*tag= b

extra 40 N-terminal amino acids to the encoded ABC1 protein (see AAM50228). The invention provides 4 common polymorphisms in the different Tangier Kindreds. In the variant genes (numbering as in different Tangier kindreds. In the variant genes (numbering as in AAT70314), G is changed to A at position 596. T is changed to C at position 1136. A is changed to G at position 2589 or G is changed to C at position 136. Or any combination of these. All of these polymorphisms alter the amino acid sequence of ABC1 and therefore polymorphisms alter the amino acid sequence of ABC1 and therefore may affect its function. The 2 most common polymorphisms (G596A) and A2889G) are both associated with a decreased in vitro ApoA-1 mediated efflux of cholesterol from mononuclear phagocytes, a cature typical of Tangier disease. 3 of the variants (G596A, A289G and G3456C) are significantly increased in a population of men having low high density lipoprotein-cholesterol levels and established coronary heart disease (CHD) relative to CHD-free control subjects. The use of the provided ABC1 polymorphisms for the diagnosis and treatment of lipid disorders, cardiovascular diseases, and inflammatory diseases (c.HD) relative cardiovascular erythematodes) is claimed. Modulation of ABC1 transcripts or proteins by antisense or ribozyme technology or RNA decoys is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         217 ttgctgctgtggaagaacctcactttcagaagaagacaaacagtaagcttgggtttttca 276

The polynucleotides and polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, hemmatopolesis regulating activity, issue growth factor activity, immunomodulatory activity and activity issue growth factor activity, immunomodulatory activity and treatment of cancer, leukaemia, nervous system disorders, arthritis and

```
The sequence represents the coding sequence #1 of human ABC1. The nucleic acid sequence, primers and probes derived from the ABC1 sequence, and polypeptides and vectors are useful for the prevention of atherosclerosis, in a subject affected by a dysfunction in the reverse transport of cholesterol. The polypeptide encoded by the ABC1 gene is useful for screening for an active ingredient for the prevention or treatment of a disease resulting from dysfunction in the reverse transport of cholesterol. The nucleic acids and polypeptides are also useful for treating and preventing ardiovascular and neurological pathologies, and other diseases e.g. Tangler disease, lecithin-cholesterol (LCAT) deficiency, malaria and diabetes.
